WIDGET REDESIGN

This kind of faucet can be found all over the US, but I think it is not easy to use. To rotate is more complex than to switch up and down, because for water faucet, rotation is not a good mapping. But switch is very straightforward, and it can accurately reflect system state.

WEEKLY SKETCH

Manfrotto Tripod

The logo part is actually a button, when pushed, the head can be adjusted in all directions. The logo is red and kind of sticking out, so it is a good signifier.
